Hi Team,

Since we have to submit the topic of our project by tomorrow and we appear to be still deciding I think what will actually help us make this decision is to have a better understanding of each others opinion into why they believe we should select their project. [We all want to choose a subject that is interesting to us and something we can complete on time and get the A.](#) I believe the best approach to achieve this would be to submit a project proposal (word document) that will briefly discuss the below considerations. We can use these proposals as part of our project design documentation which should be counted towards the final project grade. I will submit the proposal by pushing it to the repository: <https://asalah-amman@bitbucket.org/comp474spring17/comp474springteam.git>

Considerations:

- What needs to be implemented in order to complete this idea as a project? To answer this consider the below:
 - What programming languages will be used?
 - What is the your estimate on the amount of time it would take to implement & test the code used to develop the project. Please consider the below points:
 - How we will persist data (file, database, or what?)
 - Please provide a degree of reasoning into why you think it will take the time you estimated and please include any assumptions you are making
 - Estimates I know are not accurate, but lets try to target a 75% accuracy when compared to the real development effort made.
 - Will we be using a web-based UI or an application-based UI?

****Action Items: ****

- I will target submitting this proposal by tonight around 11 pm. This will give everyone time to review it and make a knowledgeable decision.

****NOTE**** I noticed that Lashaun updated the repository 15 hours ago from the time of this email. Is he part of the group? If so let me know I can forward this email to him.

Thanks,
Alla

Subject: Group Project COMP 474

Hi,

So it appears everyone is on board. I just wanted to share with you guys a couple of points:

1. We can use slack to communicate and the link is <https://comp474spring17.slack.com/signup> .
 - Already added you guys.
 - Also attached a Word doc that details various deadlines that is titled **Timeline**.
 - Attached a document titled **Programming Language Preference & Misc. Info**. --> Used to document information that will be easy to reference outside of chat history. Like repository URL,
2. I would like us to keep the in mind the short timeline available for this project development. With that being said, I would really prefer choosing a project with end-goals that are ambitious but not so ambitious that we won't be able to complete it on time.
3. Created a Bitbucket repository for code versioning. Repo path: <https://bitbucket.org/comp474spring17>

I would like to make a suggestion. I'm interested in implementing a mid-scale business management system that would target the real estate industry. Specifically I want to create a UI that allows individuals or organizations to manage multiple rental, business, or retail properties. Alternatively we could simply focus on a single industry like rental properties (condos, apartments, homes, town homes,...etc). My reasoning for choosing this is personal interest in topic and that I feel like it's something we can pull off within the 5 week implementation window we have. The UI could be a web-based or application-based. Please note this is only a suggestion.

Next Action:

By 3/29/2017 the professor wants us to choose a subject for our project.

Thanks,

Alla

Subject: Group Project COMP 474

Hi,

I wanted to send this email to see if anyone is interested in joining as a group to work on a project. I don't have anything in mind. The important thing is for everyone to agree on it.

Ideas for open source projects.
